

TKF

Orange plastic cable reels

More durable and efficient than ever before!

Light-weight

Plastic cable reels are much lighter than wooden ones and therefore easier to use.

Time saving

Fewer different diameters and easier to roll thanks to the perfectly round shape.

Robust

Water absorption, splintering, nails and clamps (the main disadvantages of wood) are history.

100 % Recyclable

At the end of their life cycle, plastic cable reels can be recycled into new reels.

Choose TKF - Choose quality!

TKF's orange plastic cable reels

TKF is a market-oriented company that develops high-quality cable solutions and delivers them to clients in the Broadband, Energy, Marine & Offshore, Installation, Industry and Infrastructure sectors.

The well-known orange wooden cable reel has been the main means of packaging our cables since TKF was founded in 1930! The orange cable reel is often prominently visible at sports and art events and as such it is the showpiece of TKF.

However, TKF will now replace part of its wooden cable reels by modern plastic reels. Not an easy choice, but definitely a logical one. Apart from all emotions, the new plastic cable reel has many advantages.

- ✓ Plastic cable reels are more robust and much lighter than wooden ones
- ✓ No more problems with water absorption, splintering, nails and clamps
- ✓ More efficient to use thanks to fewer different reel diameters
- ✓ At the end of their life cycle, the reels can be fully recycled into new reels

Plastic and the environment

We all know the problem of plastic lying about in the open country. Plastic does not decompose, but that is precisely the main advantage of plastic cable reels. The material is durable and can be perfectly recycled into new TKF cable reels, the so-called cradle-to-cradle principle. At the end of its life cycle, the product is in fact reborn. As a result, plastic cable reels are better for the environment than the familiar wooden reels.

The first orange plastic cable reels

In 2010 an increasing number of plastic cable reels will be used. In the meantime, the first orange plastic reels have been wound and sent to our customers. We realise that after 80 years of wooden cable reels, this way of working will also affect your logistical organisation. The replacement of wooden cable reels by plastic ones is a gradual process that eventually will lead to benefits for all parties involved. We trust you will understand our choice. If you have any questions, please do not hesitate to contact Jan Janssen, our Packaging Engineer.
